

SUBJECT INDEX TO VOLUME 8

ADAM10	163	3D structure preparation of	419
model of G1254023X binding into	164	use of virtual library	419
molecular modeling to	163	virtual screening for	417
screen for inhibition of	163	Anti-HIV-1 RT inhibitors	417
ADAM10-deficient fibroblasts	167	combined docking with neural	417
inhibition of residual shedding in	167	computational method for	418
ADAM17	163	from medicinal plants database	417
model of G1254023X binding into	164	networks approach to	417
Agrochemical high throughput	584	role of molecular docking	419
data management in	586	3D structure preparation of	419
<i>in vivo</i> screening of	584	use of virtual library	419
organisms in	584	virtual screening for	417
Agrochemical library synthesis	582	Antimalarials	41
alternative strategies for	582	activity of	50
Agrochemical research	589	aminopeptidase Pfa-M1 as target for	45
high throughput screening in	589	design of	50
in solid phase support	599	dual molecules as	49
role of chemical libraries	590	effect on erythrocyte	57
targets for <i>in vitro</i> high throughput screening	592	hypothetical pharmacophore of	53
Agrosciences	555,563	inhibition of <i>de novo</i> plasmodial PC biosynthesis by	57
applications of combinatorial chemistry in	563	interaction with plasmodial hemoglobin degradation	
solid versus solution phase library synthesis techn-		metabolite	58
ologies to	555	libraries of	41
4-Aminoquinolines	42	mechanism of action of	57
libraries of	42	phospholipid metabolism as novel pharmacological	
Aminotriazines	633	target for	50
automated synthesis of	633	proteases as promising targets for	43
Amphipathic α -helical cationic peptides	258	quaternary ammonium salts as	50
Analytical construct resins	361	rationale for	50
advances in	361	role of cationic head	51
Antibacterial peptides	235	Antimalarial agents	81
analogues of	236	development of	81
Antibiotic resistance	241	new permeability pathways for	81
problem of	241	selective routes for	81
Antibody-phage display methodology	117	targets for	81
affinity maturation in	121	Antimalarial drugs.....	89
applications of	122	absorption of	90
considerations on	117	drug-drug interactions of	94
Anti-HIV actives	403	<i>in silico</i> ADME predictions of	95
<i>in silico</i> design of	403	metabolic stability of	92
role of fragment descriptors	403	metabolite identification of	93
structure-property modeling of	407	WRAIR'S ADME program for	96
Anti-HIV-1 PR inhibitors	417	Antimalarial drug discovery	15,63
combined docking with neural	417	fatty acid synthesis for	15
computational method for	418	hemozoin synthesis pathway for	63
from medicinal plants database	417	role of acetyl-COA carboxylase	17
networks approaches to	417	role of acyl carrier protein	17
role of molecular docking	419	role of enoyl-ACP reductase	22
role of neural networks	420	role of malonyl-COA:ACP transferase	18
		role of α -hydroxyacyl-ACP dehydratase	21
		role of β -ketoacyl-ACP synthase I/II	24
		role of β -ketoacyl-ACP synthase III	18
		role of β -ketoacyl-ACP reductase	21

target for	15	2-Aryl-3-pyridyl-thiazolidin-4-ones	431
targeting of	63	topological descriptors in modeling of	431
Antimicrobial peptides	211,219,241,273	HIV inhibitory activity of	431
activities of	211	Automated coagulation testing	356
and membrane curvature strain	250	by flowcytometry	356
as novel antibiotics	243	by polymerase chain reaction (PCR)	357
bacterial killing by membrane disruption	246	distinctive features of	358
bacterial killing by receptor-linked processes	252	instruments used in	356
carpet mechanism of	247	using automated platelets function analyzer	357
<i>cis</i> -acting systems using sensitive hosts for	224	using microarrays technology	357
classical models of	247	Automated solution production	516
domain formation/defect structures	248	Automated synthesis	631
high throughput screening of	219	at Bayer croppscience chemistry Frankfurt	631
impairment of membrane function by	248	Biomarkers	700
<i>in silico</i> /virtual screening of	220	peptides as	700
<i>in vitro</i> systems of	230	Bis amidines	52
<i>in vivo</i> screening systems of	223	as quaternary ammonium bioisosteres	52
lipid composition of	245	Bis guanidines	52
lipids as receptors for	253	as quaternary ammonium bioisosteres	52
mechanisms of	211	4-Bis(3-aminopropyl) piperazine libraries	391
membrane architecture of	245	as potent antimalarial leads	40
membrane disruption by	250	for identification of new targets	39
membrane perturbation by	241	in discovery of classical chloroquine-like antimalarials	39
membrane translocation of	252	tools for identification/validation of new	
mode of action of	244	targets	43
molecular mechanisms of	241	Cathelicidins	273
optimization of	219	activation of antimicrobial activity by	274
pore formation by	247	additional biological effects of	276
QSAR of	222	amino acids in	275
selection algorithms of	222	combinatorial chemistry of	273
simulation methods for	223	-helical peptides in	274
strategies toward development of	243	inactivation of	276
structural information of	221	loop peptides in	275
structure activity relationship studies of	253	primary/secondary structure of	274
suicide expression system of	226	resistance of	276
transacting screening systems using insensitive		strategies for designing new drugs from	276
hosts for	223	Cationic antimicrobial peptides	257
<i>trans</i> -acting screening systems using sensitive		discovery of	257
hosts for	228	peptide families of	258
Apicoplast organelle	15	other structural classes of	258
metabolic pathways of	15	bacterial resistance to	264
Applied proteomics	685	immune modulating activities of	265
in allergy/immunity	687	combinatorial library screening for activity of	269
in diabetes	685	Cell card™ system	293
in digestive health	685	for lead prioritization of G protein-coupled receptors	293
in health	685	novel approach to assessing compound selectivity	293
in milk	688	to multiplexing cell-based assays	293
in nutrition	685	Cell-based CX3CL1	164
in obesity	685	release inhibition of	164
in probiotics	689		
Artificial functional muteins	145		
creating system for	145		
with advanced medicinal applications	145		

Chemogenomics	43	carbonyl component variations to	618
as new targets in treatment of malaria.....	43	chemistry of	617
Choline analogs	58	derivatives of	621
vs. cholinergic effects	58	olefin component variations to	620
Combinatorial chemistry	355,377,387	parallel/solution phase synthesis of	617
as tool for targeting stages of replicative HIV-1 cycle	387	<i>via</i> versatile multicomponent reaction	617
in agrosiences	555	3-1 Dinucleophiles	620
optimising agrochemical physical properties by	579	Disintegrin-like metalloproteinases	
role of inputs selection	582	(ADAM10/ADAM 17)	161
role of rational library design	558	effect of metalloproteinase inhibitors	161
role of sample integrity/logistics	583	model of G125023X binding into	164
selection of ag-like privileged building blocks in	579	molecular modeling to	163
targeting protein families by	581	effect on cell surface molecules	161
Combinatorial synthesis	377	effect on phorbol ester-inducible shedding	161
of adsorption inhibitors	382	DNA sequences	449
of anti-HIV agents	377	characterization of	449
of CCR5 antagonist	382	condensed matrices of	450
of HIV-1TAT-TAR binding inhibitors	383	sieve ratio for	449
of protease inhibitors	379	sieve ratio of trinucleotide in	449
of reverse transcriptase inhibitors	377	similarity analysis of	449
Creatinine	758	Dual linker construct resins	363
comparison from female/male individuals	763	chemical stability studies employing	363
differential peptide display of	759	Fatty acid biosynthesis	16
identification by nanoelectrospray quadrupole TOF		Fim H	130
mass spectrometry	759	in <i>Eschireshia coli</i> strains	130
in renal/post-renal disorders	764	First generation compounds	54
CXCLI	167	mono/bis quaternary ammonium salts as	54
inhibition of constitutive/inducible shedding of	167	Fragment descriptors	403
CXCLI6	167	Functional G protein-coupled receptor assays	311
inhibition of constitutive/inducible shedding of	167	for primary/secondary screening	311
Cytokinens	173	Functional peptidomics	767
binding epitopes of	177	for discovery of bioactive peptides	767
physiological role of	176	in cell culture models	767
structure-function analysis of	177	insulin/precursor peptide identification by	768
use of phage display	176	Functional-genomic	659
Databases	713	cell analysis in	665
Datamining	720	protein analysis in	662
multiple statistical testing procedures for	721	single molecule analyses in	664
projection methods for	720	transcriptome analysis in	662
Defensins	209	trends in technology of	659
and other antimicrobial peptides	209	typing of DNA markers by	661
definitions of	211	Functionalized polymer carrier	150
Designer cytokines	176	parameters for	150
considerations for therapeutic use of	176	with DDS capabilities	150
IL-6 antagonists	177	Fungicides	570
LIF-antagonists	178	libraries of	570
EPO mimetics of	178	-Galactosidase reporter assay	299
Differential display gel-free proteomics	673	-Galactosidase reporter gene assays	296
Dihydropyridine miticides	617		
aniline component variations to	618		

Gel based proteomics	670	non-physiological process of	68
use of 2D-PAGE	670	nucleation sites for	69
use of 2D dige	670	physiochemical oxidative mechanism of	69
Gel free proteomics	671	quantitative infra-red spectroscopic assay of	73
use of affinity tags	672	radioactive ¹⁴ C-heme incorporation assay of	73
use of cofradic	672	spectrophotometric assays of	72
use of mudpit	671	– ematin formation	41
use of N-teromics	672	inhibition of	41
use of peptide arrays	673	– Hematin formation assay	63
GeneBLAZer reporter gene assays	294	<i>in vitro</i>	63
multiplexing of	294,296	technologies for	63
Genome projects	659	Heme detoxification pathways	65
trends in technology of	659	of malaria parasite	65
Glucose uptake	769	Hemoglobin	43
Glycobiology	153	Hemoglobin digestion	64
application of chiral scaffolds	158	by malaria parasite	64
application of synthetic carbohydrate libraries for	153	role of multiple proteases in	64
combinatorial chemistry in	153	Hemozoin	66
Glycomimetics	157	as antimalarial drug target	74
G-protein coupled receptor assays	285	biomineralization/biocrystallization mechanism of	70
data quality of	289	crystalline structure of	66
screening outcome of	290	cytosomal pathway of biogenesis of	70
sensitivity of	288	in malaria parasite	68
to measure affinity/efficacy by	285	mechanism of formation of	68
G-protein-coupled receptor (GPCRs)	285,301,311	molecular characteristics of	66
automation considerations to study	287	role of inner membrane of endocytic vesicles	70
CXCR4 redistribution assay for	302	Herbicides	564
function of	312	libraries of	564
functional assays for	286	High content screening	301
generation of stably transfected U20S cell line for	301	for G protein-coupled receptors	301
high throughput assays for analysis of	312	using cell-based protein translocation assays	301
in cell analyzer 3000 assay procedure for	302	High throughput coagulation analyzers	353
phosphatidyl-inositol assay for	303	chromogenic test for	355
reagent generation/provision to study	286	coagulation assays of	355
G _Q coupled GPCRS	313	distinctive features of	358
analysis of	313	immunochemical methods for	355
Gram negative bacteria	127	methods of end point detection by	356
Gram positive bacteria	131	principles of automation of	354
G _s /R G _i coupled GPCRS	315	High throughput screening (HTS)	181,320,557,589
analysis of	315	assays/assay platforms for	188
-Helical peptides	259	behaviour of IMAP in	320
structure-activity relationships of	259	for protein kinase inhibitors	181
-Hematin	68	homogeneous bead-based technologies of	189
application in high throughput screening	71	<i>in vitro</i>	591
biocrystal growth assay of	74	<i>in vivo</i>	590
chemical formation of	68	optimizing agrochemical physical properties by	579
experimental approaches for <i>in vitro</i> formation assay	71	role in agrochemical discovery	557
hisitidine rich proteins for	69	role of chemical libraries	590
HPLC assay of	73	role of inputs selection	582
lipids catalyzed formation of	69	role of sample integrity/logistics	583
		selection of ag-like privileged building blocks in	579
		separation-based techniques of	188

targeting chemical inputs by	557	HIV	387
targeting protein families by	581	anti-HIV chemotherapy in	389
High throughput screen actives	477	life cycle of	388
analytical evaluation of	477	use of entry inhibitors	390
biofractionation system 1 for	478	use of integrase inhibitors	395
biological evaluation of	477	use of non-nucleoside reverse inhibitors	392
chemiluminescent nitrogen detection of	477	use of nucleoside reverse transcriptase inhibitors	392
LC-MS-MS instrumentation system for	479	use of PNA	400
using accurate mass LC-MS-MS	477	use of protease inhibitors	396
using evaporative light scattering	477	use of reverse transcriptase inhibitors	391
High throughput screening hits	459	use of TAT/REV inhibitors	394
application of case study techniques for	465	Host defence peptides	257
component separation for	462	antimicrobial activity of	257
detection of	462	design of	257
identity confirmation of	463	effect on cytoplasmic membrane	263
integrity follow-up of	465	effect on gram-negative outer membrane	263
integrity profiling of	459	for immunity enhancing activities of	257
purity quantitation of	463	hurdles in development of	265
requirements of integrity profiling methodology	460	mechanism of action of	263
sample handing in	461	non-membrane targets for	263
sample preparation for	461	structure activity relationships of	262
using combined ESI/APCI with LC-MS	465	HTS compound libraries	489
using combined integrity and log D analysis	465	acoustic analysis of	490
using fast chromatography with LC-MS	464	application of	495
using LC/CLND/UV/MS method	464	hydration measurement of	490
using LC/ELSD method	464	in 384-well microplate hydration monitoring	496
using LC-MS/related techniques	459	<i>in situ</i> DMSO hydration measurements of	489
using packed column SFC/MS	465	<i>in situ</i> verification method for	492
using rapid automated LC-UV-MS method	465	optical/acoustic comparison of	493
using throughput eight channel method	465	to open microplate	496
High throughput sonication	499	to sealed microplates	495
in compound precipitation	505	well fluid acoustic impedance of	490
in compound stability	508	HTS quality control	521
in evaluation for compound solubilization	499	assay design considerations of	522
in optimization of compound resolubilization	508	compound delivery to assay	521
sonication uniformity of	504	data analysis of	521
trace metal ion analysis by	504	real time data mining of	524
High-throughput biomarker	743	sources of error in	521
discovery of	743	to maximize information from	521
identification by mass spectrometry	743	Human plasma	735
identification of	751	after oral glucose challenge	735
performance characteristics for	750	analysis of	735
use of MALDI-TOF/TOF-MS/MS	746	DPD analysis of	737
using differential peptide display	744	identification by nESI-qTOF-MS/MS	738
High-throughput evaluation	40	low molecular weight proteome analysis	
of physicochemical characteristics	40	by SELDI-TOF-MS	740
High-throughput liquid chromatography mass spectro-		Human urinary peptidome	757
metry data	467	characterization of	757
analytical method development for	473	Ice-nucleation protein (Inp)	130
for analytical method development	467	of <i>Pseudomonas syringae</i>	130
for quality control analysis	467	IL6	167
interpretation of	467	inhibition of constitutive/inducible shedding of	
quality control screening of	471	167
High-throughput screen	521		

IMAP screens	323	Natural product-like bicyclo[2,2,2]octenones	607
false actives in	323	agrochemical screening of library of	607
<i>In vitro</i> ADME assays	89	synthesis of	607
in antimalarial drug discovery/development	89	Natural products	529
<i>In vitro</i> -hematin formation assays	71	biological integrity of	533
physicochemical conditions for	71	challenges for	529
Insecticides	567	chemical replication of	531
libraries of	567	fractionation of extracts of	532
Intracellular parasites	57	isolation of purified metabolites from	532
drugs transport to	57	virtual screening of	533
KENT/carrasco dual linker analytical construct	363	Natural products libraries	532
Kinase inhibitors	319	synthesis of	532
using IMAP technology to identify	319	Natural products screening	529
using substrate depletion approach	319	chemical/biological integrity in	529
-Lactamase reporter assay	299	chemical dereplication steps for	530
Lantibiotics	253	rapid characterization steps in	532
LC-MALDI-MS	717	utilizing high-through MS/NMR strategies for	531
based peptide profiling	717	<i>N</i> -[1-(1,3-Benzoxazol-2-yl)alkyl]-6-alkyl-1,3,5-triazine-2,4	
datamining methodology for	717	-diamines	623
data visualization of	720	chemistry of	624
LC-MS analysis	366	design of	623
construct resins designed for	366	herbicide targeted library of	623
Library construction	119	synthesis of	623
and selection strategies	119	Neutral prodrugs	52
Lipolysis	769	deliver bis-thiazolium salts	52
Malaria therapies	15	New permeability pathways (NPP)	81
need for	15	activity for parasite growth	86
Mass spectrometry	473	as drug delivery routes	87
assessment of compounds undetected by	473	growth inhibition assays of	84
Merrifield's original multidetachable resin	361	high throughput screening for inhibitors of	82
Microbial surface display	127	inhibitor specificity of	87
flagellae in	130	inhibitors of	85
invasin in	130	level of	86
other proteins in	130	molecular identities of	86
role of Iga	130	nature of	82
role of intimin	130	problems of	86
role of peptidoglycan associated lipoprotein.....	130	properties of	82
screening of molecular repertoires by	127	serum binding of	86
Muscarinic acetylcholine receptor targeted compound		transport inhibition assays of	82
library	649	Nitric oxide donors	347
design of	649	chemistry-based pre-screen of	350
screening of	649	identification of	347
synthesis of	649	induction/preparation of microsomes for	351
Mutagenesis	537	role of biomimetic HTS application	347
effect of oligonucleotide variants	537	Novartis compound archive	513
		content of	515
		for compound management	513
		solid compound stores in	513
		solubility of	515
		stability of	515
		Novel peptide antibiotics	241
		design of	241

mode of action of	244	Peptidomic analysis	675,697,725,735,776,801
use of biophysical studies in	241	determination of peptide recovery	726
Oligonucleotides	546	DPD analysis of	727
designing of	546	identification by ESI-qTOF-MS/MS	728
Oligonucleotide library	538	identification by MALDI-MS/MS	728
construction/cloning of	539	identification of naturally occurring peptides by	675
OpmT	127	identification of novel biomarker candidates by	801
as surface-displayed <i>Eschireshia coli</i> protease	127	of blood samples	725,735
Outer membrane proteins	127	of cerebrospinal fluid in Alzheimer's disease	801
lamB as	127	of plasma	731
Lpp-OmpA as	128	of whole pancreatic tissue	776
OmpC as	128	prerequisites for	725
OmpT as	127	spiking of exogenous peptides in	727
Oximes	445	Peptidomics biomarker	775
cleavage of	445	and type 2 diabetes	775
using solid supported hypervalent organoiodine		discovery in mouse models of obesity	775
reagent	445	from islet of langerhans peptides	777
		from zymogene granule proteins	779
		Peptidomimetics	236
		Peptoids	235
		antibacterial activity of	235
		as source of compounds	235
		combinatorial libraries of	237
		with antibacterial activity	236
		Phage display	117,145,173
		affinity maturation in	121
		and PEGylation of therapeutic proteins	145
		applications of	122
		designing cytokine variants by	173
		Phage-displayed combinatorial peptide libraries	545
		collection of	545
		construction of	545
		generation of phage vectors for	546
		Phenyl iodonium (III) diacetate (PIDA)	445
		Phosphinates	637
		solid supported synthesis of	637
		via palladium (O) catalysed coupling reactions	637
		Photolabile dual linker methodology	363
		Plasmodial cyclin dependent kinase inhibitors	27
		chemical synthesis of inhibitors of	31
		developing universal inhibitor	33
		identification of	27
		identification of scaffolds for	32
		iterative screening in	27
		rational inhibitor design of	27
		targeting of	27
		use of computer aided drug design	34
		use of high throuhput screening paradigm	30
		use of virtual screening	34
		<i>Plasmodium falciparum</i>	5
		and adenylosuccinate synthetase (PfAdSS)	10
		and cyclophilin (PfCYP19)	9
		and dihydrofolate reductase/thymidylate synthase	
		PfDHFR-TS)	9

and enoyl-acyl carrier reductase (PfENR)	8	identification of substrates for	186
and formylmethionine deformylase (PfPDF)	10	microfluidic assay technology for	190
and glutathione <i>S</i> -transferase (PfGST)	9	peptide array for	186
and hypoxanthine-guanine-xanthine phosphoribosyltra- ferase (PfHGXPRT)	10	phage display for	187
and <i>L</i> -Lactate dehydrogenase (pFLDH)	6	selecting for drug discovery	182
and plasmepsin IV (PfPMIV)	7,10	separation-based techniques for	188
and protein kinase 5 (PfPK5)	9	targeting for drug discovery	183
and purine nucleoside phosphorylase (PfPNP)	9	use of chemical genetics	188
and triosphosphate isomerase (PTPI)	8	yeast two-hybrid for	187
challenge of heterologously expressing proteins of	5	Protein kinase inhibitors	184
current status of	6	in clinical testing	185
future structure-based drug design of	11	selectivity of	184
high-value targets in	11	Protein networks	710
methods used to express protein for structural study of.....	10	Protein-ligand interactions	135
structure-based drug discovery for	5	and receptor ligands	139
Poly [4-diacetoxyiodo] styrene	445	peptide combinatorial libraries for	135
recovery of	446	role of enzyme inhibitors	138
regeneration of	446	synthetic peptide arrays for	135
reuse of	446	synthetic peptide combinatorial libraries for	137
synthesis of	445	Proteomics	679,669,705
Polymer-assisted solution-phase synthesis	643	analytical strategies for protein identification	681
of 4,5-dihydro-1,4-benzoxazepin-3(2H)-ones	643	bioinformatics challenges in	705
Polyvalent substrate phage display library	198	gel-based vs. gel-free	669
construction of	198	in health	679
Post-genomic biology	807	in identification	706
analysis of data in	808	in nutrition	679
at proteomic level	807	in protein separation	705
future of	807	issue of quantitation in complex mixtures in	683
mass spectrometry in	807	mass spectrometry in	706
separation technologies in	807	MS/MS in	708
Probiotics	278	nutritional assessment by	684
Proteases	698	protein chips in	675
as signaling scissors	698	protein dynamics in	684
as therapeutic targets	700	role of biomarkers	684
Protease substrate	197	role of functional domains	710
polyvalent phage display	197	three-dimensional structure prediction using	712
screening for	197	Purification	631
Protein inhibitors	135	at Bayer cropscience chemistry Frankfurt	631
design of	135	PXR-reporter gene system	343
role of enzyme inhibitors	138	induction of luciferase activity in	343
synthetic peptide arrays for	135	Rat PXR reporter-gene	341
synthetic peptide combinatorial libraries for	137	activity of	341
synthetic receptors in	139	effect on induction of CYP3A	341
Protein kinases	182	in rat precision-cut liver slices	341
assays for compounds bind to inactive	192	Recombinant antibodies	117
biochemical purification of	187	and antibody fragments	117
crystallographic studies of	183	expression of	121
degenerate peptide libraries for	186	purification strategies of	121
fluorescent readout for	190	Recombinant matrix metalloproteinases	163
for HTS	186	screen for inhibition of	163
homogeneous bead-based technologies for	189	Recombinant metalloproteinases	164
homogeneous solution technologies for	190	inhibition of	164

Recombinant TACE	163	molecular modeling for	328,336
screen for inhibition of	163	monomer selection for	330
Reporter resin methodology	368	pooling strategy to	330
Re-sequencing	660	significance of	335
		subcellular fractionation for	336
		substrate truncation studies of	328
		truncation studies of	336
Safety-catch dual linker construct resin	365	Thiazolidinones	439
Second generation compounds	54	as anti-HIV agents	439
aromatic amidine compounds as	54	biological activity of	440
bis amidine as	54	chemistry of	439
bis guanidine as	54	modeling studies of	440
Serine/threonine	320	QSAR studies of	439
IMAP assay for	320	synthesis of	439
-Sheet peptides	260	Third generation compounds	54,55
structure-activity relationships of	260	precursors of	55
Site-specific polymer-conjugation	148	synthesis of	54
method for	148	TNF- converting enzyme (TACE)	327
Solid phase substrate phage selection	200	analysis of reaction mixtures of	337
by substrate ELISA	200	incubation of substrates with	337
Solution archive	517	inhibitor design of	332
-Strand cationic peptides	258	molecular modeling for	336
Substrate phage display library	198	novel selective inhibitors of	327
construction of	198	significance of	335
monovalent vs. polyvalent	198	subcellular fractionation for	336
immobilized substrate selection for	200	substrate specificity of	327
solution substrate selection for	199	substrate truncation studies of	328
substrate profiling using	199	synthesis of inhibitors of	337
		truncation studies of	336
TACE inhibitors	327	Total laboratory automation (TLA)	359
from two-dimensional substrate mapping	327	for coagulation analysis	359
LC/MS quantitation of	331	Vertebrate defensins	212
library design of	329		
library synthesis of	337	Yeast display	131
