

SUBJECT INDEX TO VOLUME 6

Apoptosis	179	Cardiac hypertrophy	345
pancreas plasticity regulation of	179	initiation of	345
Arterial hypertension	331,367,395,407	b-Cell 91,96,219	
and coronary atherosclerosis	379	function assessment of	91,100
antihypertensive treatment for	401	insulin secretion vs.	96
associated with obesity/metabolic disorders	410	intravenous vs.	96
biochemical assays for	410	production from adult-derived cells	225
clinical assessment of	407	production from embryo-derived cells	220
conductance/resistance vessels in	331	production from foetal-derived cells	225
coronary circulation in	367	role of graded glucose infusion test in	99
dyslipidemia in	415	role of hyperglycemic glucose clamp in	93,98
effect of structural/functional abnormalities on		role of hyperinsulinemic euglycemic glucose	
myocardial perfusion in	370	clamp in	92
effects of therapeutic interventions on coronary		Cholesterol	305
circulation for	376	metabolism of	305
epidemiological data of	407	turnover of	307
functional changes in	369	c-MYC	182
Goldblatt model for	395	and survival signaling	184
kidney circulation in	395	as master regulator of cellular growth	182
pathophysiological mechanisms of	374,410	as transcription factor	182
renal ablation model for	396	controlling of	183
renal autoregulation in	396	function in normal cell growth/proliferation	183
role of microvascular network in	335	in apoptosis	183
role of resistance arteries in	335	in diabetes	186
structural changes in	367	inherent tumor suppressor activity of	185
therapeutic management of	417	role in pancreas	185
vascular biology of	333	Dahl-S Hypertension	340
Automated receptor modeling (ARM)	296	Desoxycorticoandrosterone (DOCA)-	
computational three-dimensional model of		salt hypertension	339
SHREC generated by	296	Diabetes	139,181,219,407
Bariatric surgery	127	and hypertension	409
indications of	127	barriers in mammalian cell encapsulation for	
techniques of	127	treatment of	139
Beta cell mass homeostasis	179	biochemical assays for	410
pancreas plasticity regulation of	179	cell therapy for	220
role of c-Myc in	179	b-cells for cell therapy in	219
signaling pathways in	181	clinical assessment of	407
Blood pressure	319,320	endothelial dysfunction in	415
influence of gender/ethnicity/geographical		epidemiological data of	407
origin on	326	hyperglycemia in	414
reclassification of	320	islet-derived bioactive factors in	147
related cardiovascular diseases/end-organ		islet transplantation in	220
damage	324	longevity in	147
risk categories of related diseases to	319,323	pathoetiology of	181
Brain death	209	role of extravascular devices in	141
insufficient oxygen supply in	210	role of extravascular microcapsules in	143
Cadmium	27	role of intravascular devices in	140
as endocrine disruptor in	27	therapeutic management of	417
effect on steroidogenesis	30	Diabetes resolution	127
estrogenic effects of	32	mechanisms of	127
mechanism of action of	31	mechanisms of surgical weight loss in	134
reproductive effects of	27,29	Diastolic blood pressure (DBP)	319
toxicokinetic of	27	3,5-Diiodothyronine	255
Carbamates	45	biological actions of	255
		cellular targets of	259

- control of energy metabolism by 257
 effects in no-mammalian species 261
 therapeutic perspectives of 255
 to reduce adiposity in rats by burning FATS 261
- Encapsulation 140
 approaches of 140
- Endocrine disruption 27
- Endocrine disruptors (EDs) 3
 in female reproductive system 5
- Endogenous pancreatic islets 168
- Environmental stress 209
 destruction of natural microenvironment in 213
 induction/amelioration of 209
 in isolated islets transplantation 209
- Environmental toxicants 37
 ovarian toxicity of 37
- Essential hypertension 320
- 17 β -Estradiol (E2) 281
 cell functions modulated by 282
 rapid membrane-initiated effects of 281
- Estrogens 267
 coupling of non-genomic signal transduction
 cascades to nuclear transcription by 274
 effect on dendritic growth 277
 effect on intracellular calcium stores 270
 effect on VGCCs 270
 genomic/non-genomic modes of 268
 in lordosis behavior 269
 in neuroblastoma cells 273
 mediated calcium flux 269
 phosphorylation of 274
 physiological functions affected by coupled
 signaling by 276
 role in transcription 267,269
 signal transduction pathways of 269
 two-pulse paradigm for 269
 VGCCs in transcriptional potentiation by 271
- Estrogen receptor- α 281
 cys447 S-palmitoylation of 283
 drug targeting to 284
 functions of 281
 lipid addition with 283
 plasma membrane localization of 281,282
 protein association with 283
- Experimental hypertension 395
- Flutamide 8
- Free radical 305
 attack on cholesterol 305
- Gene therapy 202
- Glucocorticoids (GC) 291
 anti-inflammatory actions of 292
- apoptotic action of 293
 GR-mediated action of 292
 molecular mechanisms/clinical aspects of 292
 non-genomic effects mediated by PM-
 residing GC-recognizing proteins (PM-GC-
 receptors) 293
 non-genomic/non-nuclear effects of 292
 signaling pathways form complex network 298
- Gonadotropin receptors 57
- Graft 146
 longevity of 146
- Hepatic insulin resistance 84
- Hyperglycemia 181
 glucose toxicity by 181
- Hypertension 319,331
 BP-based treatment for 322
 definition of 320
 endothelium dysfunction in 335
 large arteries in 331
 mechanisms of resistance in 336
 microvascular rarefaction in 338
 risk categories of 323
 role of microvascular network in 335
 role of resistance arteries in 335
 subtypes for 321
 trials for 327
- Innate immunity 105
 efferent arm of 105
 humoral response of efferent arm of 105
- Insecticides 45
 adverse effects on reproduction 45
 and role of catecholaminergic receptors 52
 and role of cell calcium 51
 and role of gene expression 52
 and role of nuclear receptors 51
 and role of oxidative stress 52
 and role of steroidogenesis 52
 epidemiological evidence in humans for
 adverse effects of 48
 evidence for on reproductive functions 50
 mechanism of action of 51
- Insulin resistance 81,111
 and afferent arm of innate immunity 111
 clinical features of 81
 definition/measurement of 84
 metabolic links with obesity 85
 pathogenesis of 81
 role of adipokines in 86
 role of regional adiposity in 87
- Insulin sensitivity 91
 arginine tests in 99
 assessment of 100
 assessment of b-cell function in relation to 101
 intravenous glucose tolerance test in 97
 methods of assessment of 91

- role of graded glucose infusion test in 99
 role of hyperglycemic glucose clamp in 98
 Ischemic nephropathy 398
 Islet engraftment 167
 physiology of 167
 Islet innervation 169
 Islet revascularization 155
 adenovirus-mediated gene transfer to 161
 anatomy of 155
 benefit/safety issues of 163
 contribution of intra-islet endothelial cells to 158
 effect of immunosuppression on 159
 effect of islet cryopreservation on 160
 effect of prevailing hyperglycemia on 159
 effect on islet survival/function 158
 factors affecting 159
 lentivirus-mediated gene transfer to 162
 mechanism of 157
 nonviral vector-mediated gene delivery to 162
 rAAV-mediated gene delivery to 161
 therapeutic angiogenesis for 155,160
 Islet transplantation 191
 donor selection for islet isolation in 194
 history of 192
 in children/type-2-diabetes 203
 islet isolation technique in 197
 pancreas preservation for islet isolation in 195
 pancreas procurement in 194

 Left ventricular hypertrophy 343
 determinants of 343
 effect of oxidative stress on 356
 experimental models for 344
 extra-intracellular signaling in 348
 intracellular signaling pathways in 350
 mechanical initiators for 345
 myocyte stretch in 345
 negative regulators of 359
 neuro-humoral initiators of 348
 transcriptional/post transcriptional regulation
 of 358
 Lipid peroxidation 309
 mechanism of 309
 Lordosis behavior 276
 by non-genomic/genomic estrogen action 276
 L-Thyroxine 235
 actions of 235
 analogues of 239
 as hormone 235
 as prohormone 235
 at cell membrane 235
 effect on cytoskeleton/extracellular matrix 236
 identity of plasma membrane receptor for 237
 in signal transduction 237
 medicinal uses of 238
 modulation of plasma membrane ion pumps/
 channels by 236

 Male reproductive system 9
 DDE in 10
 methoxychlor in 10
 phenol products in 11
 TCDD in 11
 Malignant nephrosclerosis 403
 Masked hypertension 327
 Metabolic syndrome 407
 biochemical assays for 410
 clinical assessment of 407
 epidemiological data of 407
 therapeutic management of 417
 Methoxychlor 15
 acute toxicity of 21
 binding to hormone receptors 21
 effects on female reproductive system 22
 effects on male reproductive system 23
 effects on mammary gland 23
 human exposure of 20
 reproductive/endocrine effects of 15,21
 Microencapsulation 144
 biocompatibility issues in 144

 Neuroimaging 75
 for study of human obesity 75
 methodological considerations of 76
 troubleshooting of 77
 Neurons 272
 membrane estrogen receptor in 272
 p-Nonylphenol 15
 acute toxicity of 17
 effects on female reproductive system 18
 effects on male reproductive system 19
 effects on mammary gland 19
 reproductive/endocrine effects of 15,18
 Nuclear receptor superfamily 273
 cross talk by 273

 Obesity 81,105,119,127,407
 β 3-adrenergic receptor agonists in 124
 biochemical assays for 410
 body fat distribution in 81
 cellular mediators of 110
 clinical assessment of 407
 clinical features of 81
 definition/classification of 81
 epidemiological data of 407
 fat distribution/regional adiposity of 82
 GLP-1 in 121
 11- β hydroxysteroid dehydrogenase type 1 in 124
 hypertension associated with 407
 indications/contraindications for surgical
 management of 128
 inflammation in 105
 insulin mimetics in 121
 insulin resistance in 105
 interleukin-6 in 106

interleukin-10 in	107	Reproduction	45
interleukin-18 in	107	adverse effects of insecticides on	45
leptin in	121	effect of chlorinated cyclodienes on	47
lymphotoxin-a (LTA) in	108	effect of organochlorines on	45
malabsorptive procedures in	131	effect of organophosphates on	48
molecular basis of	105	Reproductive system	3
oxyntomodulin in	122	for human health	3
pathogenesis of	81	impact of environmental endocrine disruption	
pharmacological intervention of hypothalamic		on	3
regulation in	122	in vitro studies of	4
pharmacological intervention of peripheral		Resistant hypertension	327
regulation in	123	Stem cells	202,227
pharmacological intervention with hormones		technology of	202
in	121	Steroid hormone	291
pharmacological treatment of	119	action of	291
PYY in	122	in SLE	296
role of adipokines in	86	physiological/clinical significance of	300
role of epicardial fat in	83	Steroid hormone receptors	17
role of muscle/liver intracellular fat in	83	Stroke	385
role of visceral fat in	82	blood pressure lowering for	387
surgery for	127	blood pressure variations during acute	389
therapeutic management of	417	effect of high blood pressure on	385
tumor necrosis factor- a (TNF-a) in	106	ischemic/hemorrhagic type	385
vertical banded gastroplasty in	130	observational studies in	390
Ovarian toxicity	37	pharmacological intervention on blood	
animal studies of	39	pressure in	391
exposure/implications for	38	primary prevention of	385
implications for	37	risk of	385
mechanistic studies of	40	secondary prevention of	387
Oxysterols	305	Subarachnoid hemorrhage	385
as bioactive molecules	305	Systolic blood pressure (SBP)	319
as markers of oxidative stress	305,308	in BP staging	321
bile acids pathways of	305	2,3,7,8-Tetrachlorodibenzo-p-dioxin	57
biological effects of	312	effect on expression of gonadotropin receptor	
in blood/tissue	311	in ovarian granulosa cells	57
non-nuclear effects of	312	effect on expression of gonadotropin receptors	
nuclear effects of	312	in gonadal cells	58
turnover of	307	effect on FSH-inducible signaling pathway	60
Pancreatic islet vasculature	168	effect on ovarian function	57
Pancreatic b-cell	180	effect on steroidogenesis in ovarian cells	57
developmental route to	180	Thyroid hormones	241,257,267
Peripheral insulin resistance	84	analogs of	244
Phthalates	7	antagonists of	245
Phytoestrogens	6	cardioprotection by	246
Plasma membrane-residing glucocorticoid recognizing		cellular targets of	259
proteins	291	control of energy metabolism by	257
biological functions of	291	effect on bone	249
physiological/clinical significance of	291	effect on Ca ²⁺ -ATPase	242
Post transplantation immunosuppression	199	effect on Ca ²⁺ -transporters	242
Prehypertension	319	effect on cardiovascular system	242
rationale of	322	effect on central nervous system	251
Renal circulation	395	effect on dendritic growth	277
in human hypertension	397	effect on liver/epithelial cells	249
Renovascular hypertension	339	effect on Na ⁺ /H ⁺ exchanger	248
		effect on Na ⁺ /K ⁺ -ATPase	249

effects in no-mammalian species	261	effect on post-natal development/sexual	
genomic/non-genomic modes of	268	development	67
in angiogenesis	247	effect on RXR/PPAR	69
in development/differentiation	250	effect on steroid receptors	69
in ischemia	247	effect on steroidogenic enzymes	68
in lipid metabolism	247	effects on implantation/fetal development	66
in lordosis behavior	269	genotoxicity of	65
in reperfusion	247	immune studies of	64
membrane transport systems of	241	in calcium homeostasis	69
non-genomic actions of	241	in glutathione metabolism	68
role in transcription	267	mechanisms of action of	68
to reduce adiposity in rats by burning FATS	261	metabolism of	64
Transplanted islate	159,173	mitochondrial function of	69
blood perfusion in	173	neurotoxicity of	65
function in	175	tissue distribution of	64
islet cell proliferation/apoptosis in	173	toxicology in mammalian animal models	63
metabolic microenvironment in	173	Weight loss	127
non-endocrine contamination in	159	mechanisms of	127
reinnervation of	174	White-coat hypertension	327
Transplanted pancreatic islets	169	Xenotransplantation	202
Tributyltin	63		
absorption of	64		
developmental studies in mammals	66
