Aims & Scope
Current Radiopharmaceuticals publishes original research articles, letters, full-length/mini-reviews, drug clinical trial studies, and guest-edited issues on all aspects of research and development of radiolabelled compound preparations, covering studies related to nuclear medicine, molecular imaging, radiotherapy, neuroradiology, interventional radiology, investigative radiology, oncology, and basic research. The scope of the journal also covers the following areas, namely radio imaging techniques, computerized medical images and graphics, preparation and application of radionuclide compounds, and their diagnostic, investigative, and therapeutic use, including the incorporation of tracer methods used in scientific research and applications. Articles related to the resources on radiation research in the field of biology and biophysics are also included.
